# Market Intelligence Research Brief

**Student Name:** Brinda Rami

**Date:** October 25, 2026

**Topic/Company:** Global Subscription Video Streaming (SVoD) — Content Investment Strategy

**Quick Suite Space:** Market Intelligence – Streaming Content | **Agent:** Market Intelligence Agent – Streaming Content

## 1. Research Objective

**Objective:** How should a streaming platform prioritize content investment — by genre, format, and region — to compete effectively over the next 12–24 months, given the current competitive landscape, subscriber-growth dynamics, and consolidation in the global SVoD market?

## 2. Scope of Research

- **Markets or industries covered:** Global subscription video-on-demand (SVoD), ~$98B in 2026 (Statista; >$200B including AVOD/FAST). Geographic focus: North America; Asia-Pacific (India, South Korea, Japan); Europe (UK, Spain, France).
- **Competitor types included:** Major global SVoD platforms — Netflix, Amazon Prime Video, Disney+, HBO Max, Paramount+, Apple TV+, Peacock. Adjacent competitors referenced only: YouTube and FAST channels.
- **Timeframe considered:** Internal dataset: Netflix catalog through ~September 2021 (8,807 titles). External research: 2023–2026, with third-party projections to 2031.
- **Key constraints:** Limited research time (one focused Quick Research run plus agent synthesis in a single working session); the dataset is a five-year-old, single-platform catalog snapshot with no viewership, subscriber, or revenue data; external sources are English-language only; no complete industry-wide 2026 subscriber data available.
- **Excluded:** Regional-only platforms (Hotstar, iQIYI, Viu, Stan); UGC platforms beyond YouTube (TikTok, Twitch); detailed live-sports rights economics; per-title production cost/ROI; viewership and engagement metrics; gaming and interactive content.

## 3. Research Approach

- **Types of questions asked:** Catalog composition (format, country, genre, rating mix — dataset); market structure (who has scale, how subscriber bases and M&A are shifting — external); growth dynamics (where growth is slowing and what monetization models replace it — external); content-strategy signals (shift toward non-English content and format vs. retention — combined).
- **How research effort was prioritized:** Started with the dataset to establish a factual baseline; spent the limited Quick Research time on one tightly scoped run covering only the seven scaled competitors and four decision-relevant themes; then directed the agent to synthesize, rate confidence for every insight, and flag single-source or outdated claims. Key figures were then spot-checked manually against the CSV and against public sources (see Section 6).
- **Tools used within Amazon Quick Suite:** Spaces (dataset, dataset reference note, research report, analysis, evaluation, and brief in one Space); Quick Research (external competitive landscape report, 2023–2026); Market Intelligence Agent (custom chat agent with the Space as its knowledge base — produced the Market Analysis, Confidence Evaluation, and this brief); Quick Sight (bar chart of movies vs TV shows for the top 15 countries).

# 4. Key Market Insights

## Insight 1: The growth game has moved from subscribers to monetization

- **Insight Summary:** North America is near saturation and new U.S. subscriptions are falling. Competitive advantage now goes to platforms that raise revenue per user — via ad tiers, pricing power, and content efficiency — rather than those chasing raw subscriber counts.
- **Supporting Evidence or Signals:**
  - 96% U.S. household SVoD penetration — [External] Kantar, Q2 2025
  - New U.S. SVoD subscriptions down ~33% YoY in 2025 (27M → 18M) — [External] Antenna, via Quick Research report
  - Netflix passed 325M paid memberships at end of 2025; net adds fell from ~41M (2024) to ~23M (2025) — [External] Netflix Q4 2025 earnings (Hollywood Reporter, Jan 2026)
  - ~40% of Netflix and ~44% of Disney+ accounts on ad-supported tiers — [External] Digital i, Q3 2025; Disney filings
  - Global SVoD market ~$98B in 2026 — [External] Statista
- **Why This Insight Matters:** If growth is structurally slowing, content investment should be judged on its contribution to revenue per user and retention, not on subscriber acquisition. That reframes every greenlight decision.
- **Confidence Assessment:**
  - **Source quality:** High — Kantar (panel data), Antenna (transaction-level data), Netflix earnings (primary source), Digital i (corroborated by Netflix disclosures).
  - **Consistency across sources:** Strong agreement across all sources; no contradictions found.
  - **Timeliness of information:** Core signals are 9–16 months old; structural saturation trends move slowly.
  - **Overall confidence level: High** — multiple independent, credible sources point the same direction. Risk: the slowdown may be partly cyclical (post password-sharing crackdown).
  - **Signal freshness:** Captured Oct 2026; Netflix figure from Jan 2026 earnings — still the latest full-year disclosure.
  - **What would change our mind:** A return to double-digit U.S. net subscription growth in 2026, or ad tiers failing to raise ARPU.

## Insight 2: International and non-English content has become a core strategy, not a niche bet

- **Insight Summary:** Non-English titles now make up the majority of Netflix's new original TV season releases, India was already the #2 producing country in the 2021 catalog, and Asia-Pacific is the fastest-growing region. Platforms that underinvest in local-language content risk ceding the fastest-growing markets.
- **Supporting Evidence or Signals:**
  - India is the #2 producing country with 1,008 titles (11.4%); Japan 259, South Korea 211, Spain 181 — [Dataset] netflix_titles.csv, first-listed country
  - 52% of Netflix Original TV season releases in 2025 were non-English, up from 49% in 2024; English-language titles still account for most Original content spend — [External] Ampere Analysis (Advanced Television, Feb 17 2026)
  - North America's share of global streamer scripted commissions fell to 37% in H2 2024 from ~46% in H1 2023 — [External] Ampere Analysis
  - Disney at only ~10% foreign-language titles — [External] Bernstein
  - Asia-Pacific SVoD CAGR of 16.8% through 2031 — [External] Mordor Intelligence

- **Why This Insight Matters:** The 2021 dataset already showed a large international presence, and external data confirms the shift accelerated. This supports doubling down on local-language originals, particularly in India, South Korea, and Japan.
- **Confidence Assessment:**
  - **Source quality:** Ampere Analysis (Tier-1 media analyst, High); Bernstein (single analyst note, Medium); Mordor Intelligence (projection, Medium); dataset (Medium for history, Low for today).
  - **Consistency across sources:** Directionally consistent, but the dataset (catalog stock, 2021) and Ampere (new releases, 2024–25) measure different things across a four-year gap.
  - **Timeliness of information:** Ampere data is 8–20 months old; dataset is ~5 years old.
  - **Overall confidence level: Medium** — trend is well supported, but the key "majority" figure comes from one analyst firm, measures release count rather than spend or viewing, and English still dominates spend.
  - **Signal freshness:** Ampere figure published Feb 2026 for calendar 2025 — the most recent full year available.
  - **What would change our mind:** Viewing-share data (e.g., Netflix engagement reports) showing non-English titles under-perform their share of releases; a second firm reporting a different share.

## Insight 3: The catalog's 70/30 movie-to-TV mix may be misaligned with retention economics

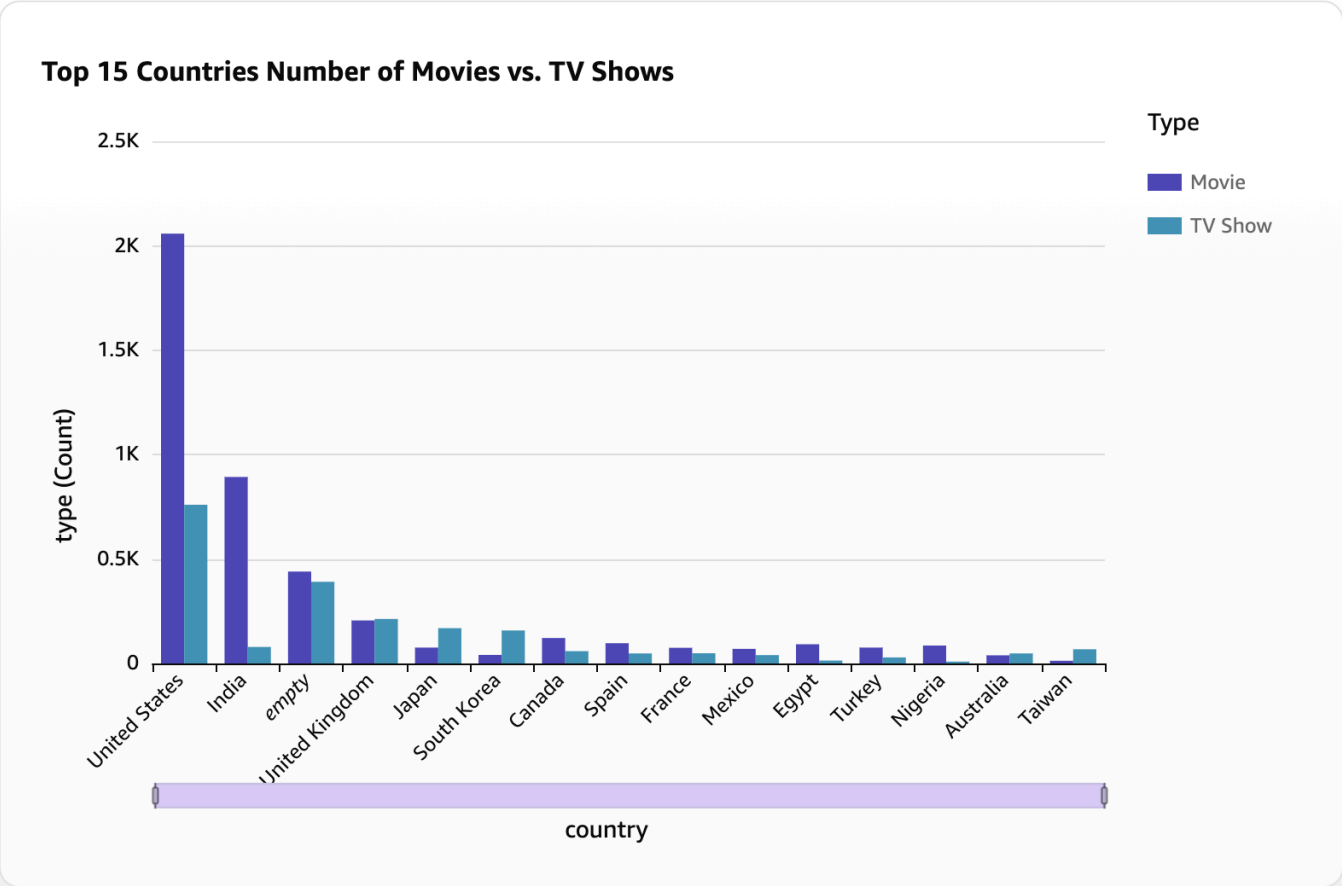

- **Insight Summary:** Movies are 69.6% of the Netflix catalog, yet serialized TV is associated with stronger retention, and TV's share of new additions was already rising. Rebalancing toward series is a plausible lever — but it is a hypothesis, not a proven finding.
- **Supporting Evidence or Signals:**
  - 6,131 movies (69.6%) vs. 2,676 TV shows (30.4%) — [Dataset] netflix_titles.csv (verified by filtering the CSV)
  - TV share of annual additions rose from 25% (2018) to 34% (2021) — [Dataset] netflix_titles.csv
  - Format mix varies by country: India is overwhelmingly movies, while Japan and South Korea skew toward TV shows — [Dataset] Quick Sight chart, Top 15 Countries: Movies vs TV Shows (Section 5)
  - Disney+/Hulu/Max bundle achieved ~59% 12-month retention — [External] Antenna, 2024–2025
  - Industry shift toward serialized content for retention — [External] Ampere Analysis
- **Why This Insight Matters:** If format mix drives churn, shifting investment toward series — especially international dramas and thrillers — could improve subscriber stickiness. The causal link is inferred, not demonstrated.
- **Confidence Assessment:**
  - **Source quality:** Dataset is verifiable but stale (Medium); Antenna is credible (High) but measures bundle retention, not format.
  - **Consistency across sources:** Weak linkage — no source directly connects movie/TV ratio to churn.
  - **Timeliness of information:** The 70/30 ratio is from 2021; today's mix is likely different.
  - **Overall confidence level: Low** — rests on a five-year-old ratio and an inferential leap from bundle retention to format retention.
  - **Signal freshness:** Dataset captured Sept 2021; relevant only as a historical baseline.
  - **What would change our mind:** Current catalog data showing the mix is already ~50/50, or churn data showing no difference between movie-heavy and series-heavy viewers.

## Insight 4: Consolidation has compressed the field to four scaled global players

- **Insight Summary:** Skydance acquired Paramount Global (~$8B, Aug 2025), and the resulting Paramount Skydance completed its ~$111B acquisition of Warner Bros. Discovery in September 2026. Netflix, Amazon, Disney, and the combined Paramount–WBD now hold the vast majority of global streaming subscribers, putting mid-tier and niche streamers under pressure.
- **Supporting Evidence or Signals:**
  - Skydance–Paramount merger closed Aug 2025 at ~$8B — [External] AP News
  - Paramount Skydance–WBD deal announced Feb 27 2026 (~$110.9B enterprise value, $31/share); DOJ cleared Jun 12 2026; EU approved with conditions Jul 2026; completed Sept 2026 — [External] Screen Global Production (Jul 24 2026); Pulse 2.0 citing Reuters (Sept 2026)
  - Netflix 325M paid memberships — [External] Netflix Q4 2025 earnings
  - Amazon Prime Video ~205M (estimate; Amazon does not report Prime Video subscribers) — [External] Deadline / Hollywood Reporter
  - Disney+ ~132M — [External] Disney earnings filings
- **Why This Insight Matters:** In a four-player market, any platform below scale must differentiate (live sports, local-language originals) or accept a niche or regional role. Content strategy should assume a larger, better-funded Paramount–WBD competitor.
- **Confidence Assessment:**
  - **Source quality:** High — wire services and Tier-1 trades for deal facts; company filings for subscriber counts. Amazon figure is an estimate.
  - **Consistency across sources:** Strong agreement on deal terms and timeline. Note: the agent's first draft mis-dated the WBD deal and treated it as unapproved; corrected after manual verification.
  - **Timeliness of information:** Deal completion Sept 2026 (very fresh); subscriber figures from late 2025.
  - **Overall confidence level: Medium-High** — deal facts are confirmed, but the combined subscriber base overlaps and the integration of Paramount+ and HBO Max is unproven.
  - **Signal freshness:** Verified Oct 25 2026 — the deal is closed, so the market-structure signal is current.
  - **What would change our mind:** Integration failure or a spin-off of streaming assets; a new entrant (e.g., YouTube) taking subscription share at scale.

## 5. Visual Evidence

- **Chart Type:** Bar chart (Quick Sight) — Netflix Catalog: Top 15 Countries, Number of Movies vs TV Shows.
- **What the visualization shows:** Title counts for the 15 largest producing countries, split by format (Movie vs TV Show). The ten largest by total titles: United States 3,211 (36.5%), India 1,008 (11.4%), UK 628, Canada 271, Japan 259, France 212, South Korea 211, Spain 181, Mexico 134, Australia 117. The format split varies sharply by country: India is overwhelmingly movies, while Japan and South Korea skew toward TV shows. Counts use the first-listed country per title; 831 titles have no country.
- **How it supports the insight:** Supports Insight 2: even in 2021, titles from outside the U.S. made up the majority of titles with a known country (~54%), and India, Japan, South Korea, and Spain — the growth markets highlighted in external research — were already significant contributors. Also supports Insight 3: the movie-heavy overall mix is not uniform, and the series-heavy markets (Japan, South Korea) are the same markets driving international growth, which links the format and regional decisions.

## 6. Confidence Assessment

*Each insight has its own full assessment in Section 4. Roll-up:*

| # | Insight | Evidence base | Confidence | Key risk |
|---|---|---|---|---|
| 1 | Growth → monetization | External only: Kantar, Antenna, Netflix, Digital i, Statista | High | Slowdown may be cyclical |
| 2 | International content is core | Dataset baseline + Ampere (key claim single-source) | Medium | Release count ≠ spend or viewing |
| 3 | 70/30 format misalignment | Dataset (2021) + Antenna bundle data | Low | Stale ratio; causal link inferred |
| 4 | Consolidation to 4 players | AP, Reuters, trades, filings | Medium-High | Integration risk; overlapping subs |

- **Source quality:** Mostly primary sources (company earnings and filings) and Tier-1 data firms (Kantar, Antenna, Ampere). Weaker inputs: market-size projections (Statista, Mordor) and some Wikipedia-sourced subscriber figures in the Quick Research report, which were not relied on for any insight.
- **Consistency across sources:** External sources agree on saturation and consolidation. The dataset and external sources agree directionally on international content but use different metrics (catalog stock vs. new releases). One factual conflict was found and fixed: the agent's draft dated the WBD deal to Oct 2026 as pending; public reporting shows it was announced in Feb 2026 and completed in Sept 2026.
- **Timeliness of information:** External signals are 1–20 months old (mostly 2025–2026). The dataset is ~5 years old and used only as a historical baseline.

- **Overall confidence level: Medium-High** — two insights at High / Medium-High, one Medium, one Low.
- **Verification performed:** Movie/TV split (6,131 / 2,676) checked by filtering netflix_titles.csv. Netflix 325M confirmed (hollywoodreporter.com/tv/tv-news/netflix-q4-2025-earnings-results-passes-325-million-subs-1236478604). Ampere 52% non-English confirmed (advanced-television.com/2026/02/17/research-non-english-content-takes-the-lead-in-netflix-originals/). WBD deal approval and completion confirmed (screenglobalproduction.com/news/2026/07/24/eu-approves-paramount-takeover-warner-bros-disovery; pulse2.com/paramount-completes-110-billion-warner-bros-discovery-acquisition-after-settlements/). The agent's chat output did not include clickable citations, so external figures were traced back to the Quick Research report's source list and to public sources.

## 7. Limitations and Risks

- **Missing data:** The dataset ends ~Sept 2021 and contains no viewership, engagement, subscriber, or revenue data; title counts are a weak proxy for strategic impact. No current catalog data was available for any platform, and Amazon does not report Prime Video subscribers.
- **Conflicting signals:** Catalog stock (U.S. 36.5% of titles, 2021) and commission flow (North America 37% of new scripted commissions, H2 2024) measure different things and could mislead if conflated. Antenna's 59% retention figure measures a bundle, not format. The agent's initial WBD deal timeline conflicted with public reporting and was corrected.
- **Potential bias or ambiguity:** The dataset reflects only Netflix, whose international and adult-skewing strategy may not represent the industry. External sources skew toward English-language analysts, under-representing Asian and Latin American research. AI-generated synthesis can state uncertain figures confidently, which is why key figures were manually verified.

## 8. Strategic Implications

- **What decisions could this inform?**
  - **Regional content allocation:** increase investment in local-language originals from India, South Korea, and Japan over the next 12–24 months (Insights 1 & 2; Medium-High).
  - **Format mix:** evaluate a deliberate shift toward serialized TV, especially international dramas and thrillers — only after validating with current catalog and engagement data (Insight 3; Low, hypothesis).
  - **Competitive positioning:** decide whether to pursue scale (bundling, partnerships, live sports) or a focused niche/regional role, now that a four-player market has formed (Insight 4; Medium-High).
- **What should *not* be concluded from this research?**
  - **Do not conclude that movies are a bad investment.** The 70/30 ratio counts titles, not spend, viewing, or profit; movies may be cheaper to license and serve ad-tier and casual viewing.
  - **Do not conclude that the combined Paramount–WBD will retain 200M+ unique subscribers or integrate successfully.** Paramount+ and HBO Max subscriber bases overlap, and past media mega-mergers (e.g., AT&T–WarnerMedia) failed to deliver expected synergies.
  - **Do not conclude that non-English content earns most of Netflix's viewing or spend.** The 52% figure counts season releases; English-language titles still receive most original content spend.

## 9. Summary for Leadership

**Executive Summary:**

The streaming market has shifted from subscriber acquisition to monetization: U.S. household SVoD penetration is about 96% and new U.S. subscriptions fell roughly 33% in 2025, so revenue per user through ad tiers and pricing now matters more than raw growth. International content has become a core strategy rather than a niche bet; India was already the #2 producing country in the Netflix catalog, and 52% of Netflix's new original TV season releases in 2025 were non-English (Ampere Analysis). The field has consolidated, with Paramount Skydance completing its roughly $111 billion acquisition of Warner Bros. Discovery in September 2026, leaving Netflix (325M), Amazon, Disney, and the combined Paramount–WBD as the scaled global players. Our overall confidence is Medium-High: the monetization and consolidation findings rest on multiple primary and Tier-1 sources, while the international-content finding relies on a single analyst firm for its strongest data point. The catalog's 70/30 movie-to-TV ratio hints at a misalignment with retention economics, but it is a five-year-old figure and should be treated as a hypothesis, not a finding. Leadership should prioritize ad-tier monetization, accelerate local-language originals in India, South Korea, and Japan, and plan for a larger Paramount–WBD competitor as it integrates its streaming services.

### Recommended Next Steps

| # | Action | Supports | Impact / Effort | Confidence |
|---|---|---|---|---|
| 1 | Commission a current (Q4 2026) catalog and engagement analysis to test the format-mix hypothesis | Insight 3 | High / Medium | Low → would upgrade |
| 2 | Get a second analyst source (e.g., Parrot Analytics, Nielsen) on non-English share of viewing and spend before major regional commitments | Insight 2 | High / Low | Medium |
| 3 | Model competitive scenarios for the merged Paramount–WBD: combined Paramount+/HBO Max service vs. separate brands, and pricing response | Insight 4 | Medium / Medium | Medium-High |

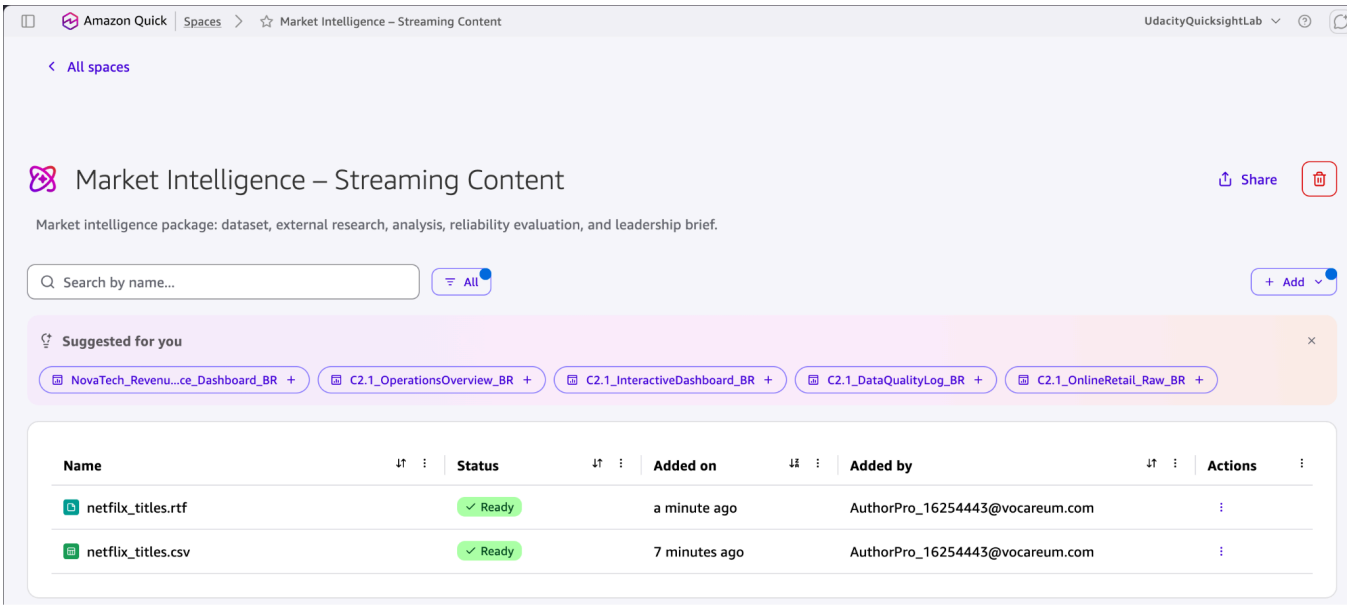

## Appendix A: Dataset Reference

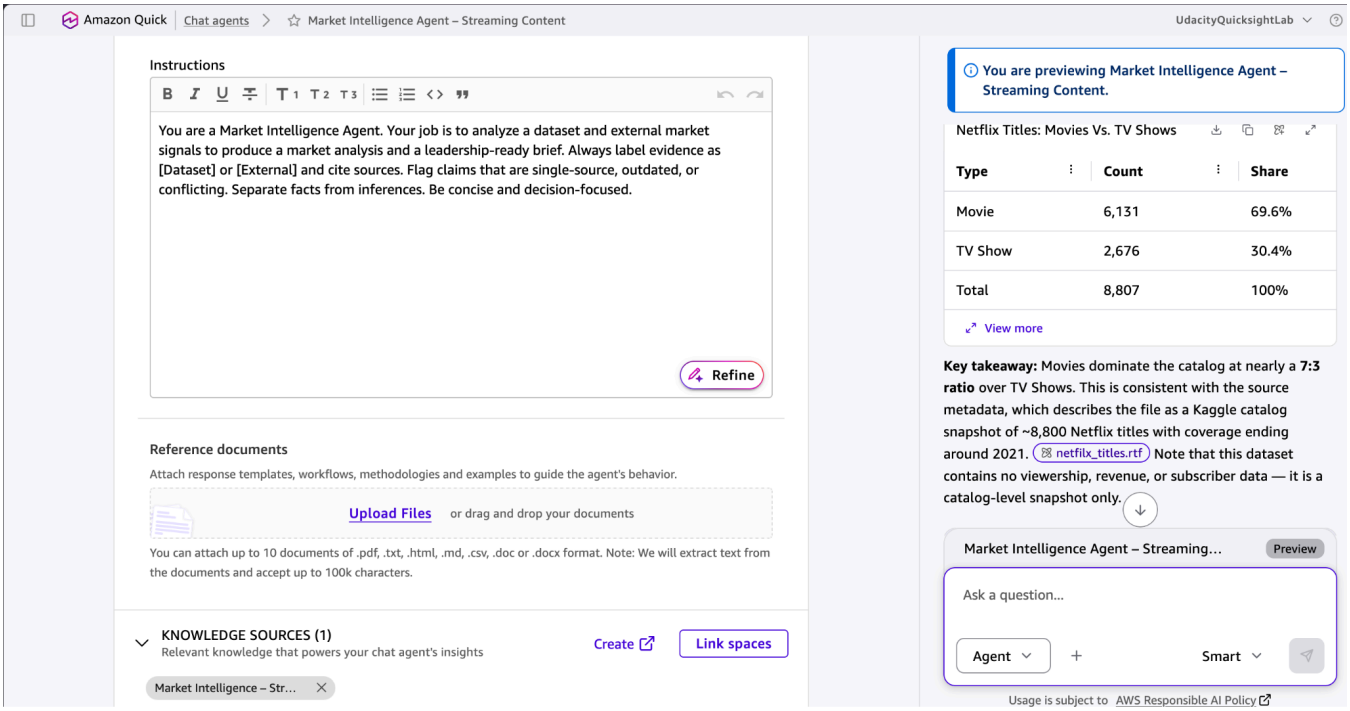

Kaggle — "Netflix Movies and TV Shows" by Shivam Bansal (kaggle.com/datasets/shivamb/netflix-shows). File: netflix_titles.csv, 8,807 titles; fields: type, title, director, cast, country, date_added, release_year, rating, duration, listed_in, description. Uploaded unmodified to the Quick Suite Space as the agent's internal knowledge base.

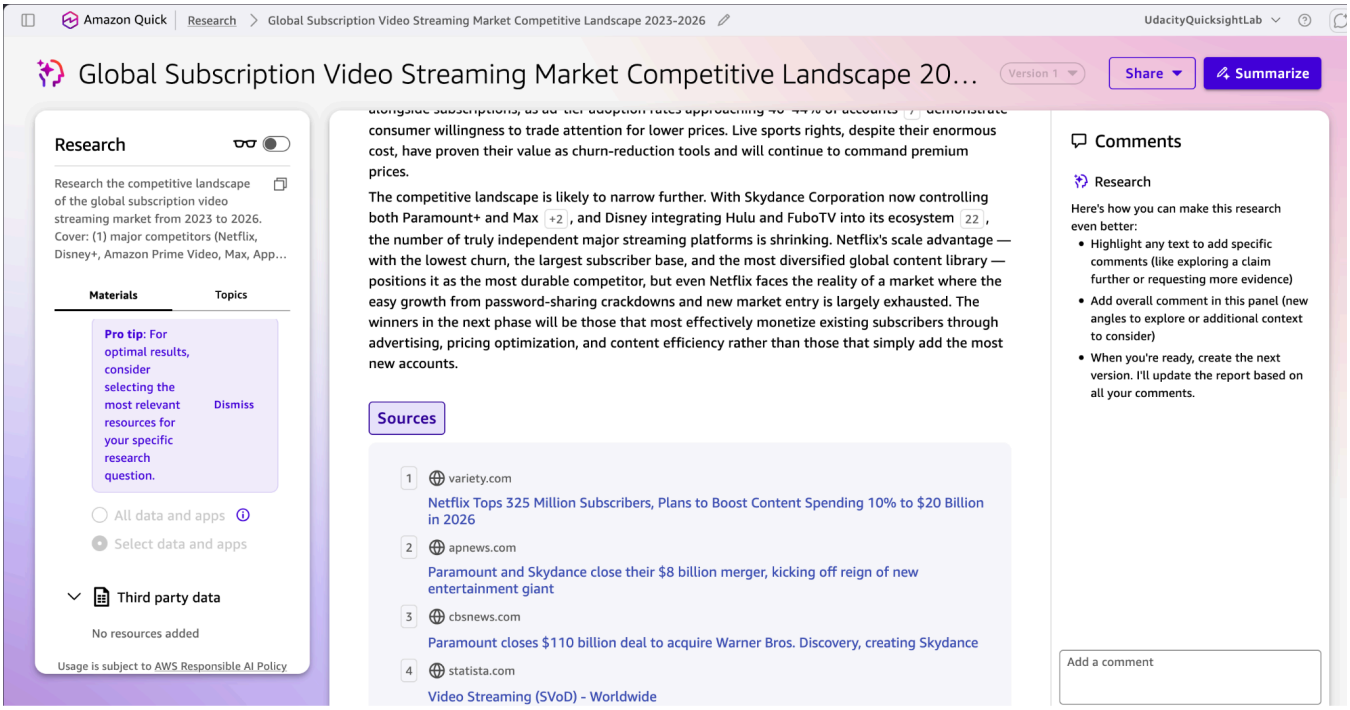

## Appendix B: Prompts That Produced the Strongest Evidence

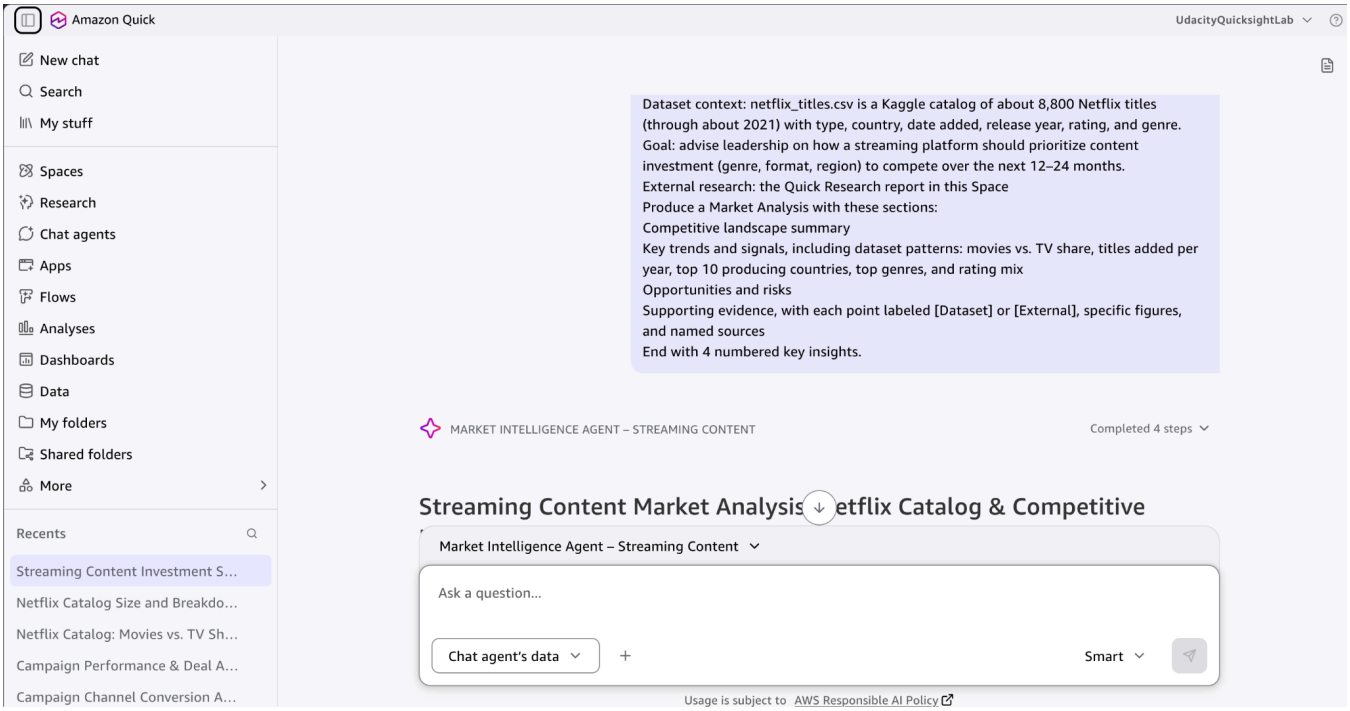

- **Quick Research:** Research the competitive landscape of the global subscription video streaming market from 2023 to 2026 — major competitors with subscriber counts, pricing tiers, and content strategy; market size and regional growth; key trends (ad tiers, password sharing, live sports, international content, bundling); where growth is slowing. Cite sources and note disagreements.
- **Market Analysis (agent):** Using the dataset context, goal, and Quick Research report, produce a Market Analysis with a competitive landscape summary, key trends and signals (including dataset patterns), opportunities and risks, and supporting evidence labeled [Dataset] or [External]. End with 4 key insights.
- **Confidence Evaluation (agent):** For each insight, assess source quality, consistency, timeliness, gaps, overall confidence (High/Medium/Low), limitations, signal freshness, and what would change our mind. Insights supported only by the dataset cannot be rated High.
- **Source tracing (agent):** List every external source behind the figures in your Market Analysis — publisher, title, date, URL. Flag any figure you cannot trace to the Quick Research report.

Key takeaway: Movies dominate the catalog at nearly a 7:3 ratio over TV Shows. This is consistent with the source metadata, which describes the file as a Kaggle catalog snapshot of ~8,800 Netflix titles with coverage ending around 2021. netflix_titles.rtf Note that this dataset contains no viewership, revenue, or subscriber data — it is a catalog-level snapshot only.

consumer willingness to trade attention for lower prices. Live sports rights, despite their enormous cost, have proven their value as churn-reduction tools and will continue to command premium prices.
The competitive landscape is likely to narrow further. With Skydance Corporation now controlling both Paramount+ and Max +2 , and Disney integrating Hulu and FuboTV into its ecosystem 22 , the number of truly independent major streaming platforms is shrinking. Netflix's scale advantage — with the lowest churn, the largest subscriber base, and the most diversified global content library — positions it as the most durable competitor, but even Netflix faces the reality of a market where the easy growth from password-sharing crackdowns and new market entry is largely exhausted. The winners in the next phase will be those that most effectively monetize existing subscribers through advertising, pricing optimization, and content efficiency rather than those that simply add the most new accounts.
