Q Exploration Questions						
For each question, record Q's answer and cross-check against your dashboard.						
#	Question Asked	Q's Answer (summarize)	Dashboard Visual Used to Cross-Check	Dashboard Shows	Match?	Notes
1	Which campaign channel has the highest conversion rate?	Direct Mail has the highest response rate at 43.2%, followed closely by Paid Social at 41.2%. The overall Lead-to-Deal Conversion Rate across all channels is 10.4% , but a per-channel breakdown of this specific metric isn't available in the current dashboard visuals.	Marketing Funnel — Funnel Stage by Channel	Direct Mail shows 53%	no	it was more accurate the first time it ran through - see screenshot
2	What is the average deal size by company size?	Enterprise companies have the highest average deal value at \$16,811.74, followed closely by Large companies at \$15,089.61. There's a significant drop-off between the top two tiers and the smaller tiers — Enterprise deals are roughly 4x larger than Medium or Small deals. Interestingly, Small companies slightly edge out Medium companies (\$4,141 vs. \$3,879), which may suggest that small companies purchasing NovaTech products tend to invest in higher-tier product offerings.	Sales Pipeline — Revenue by Company Size	Dashboard has sum instead of average. seems too small.	no	it was more accurate the first time it ran through - see screenshot
3	What is the average resolution time for critical vs. low-priority tickets?	Metric Critical Low --- --- --- **Total Tickets** 50 1,500 **Top Product Area** Authentication (18) Analytics Dashboard (431) **Dominant Sentiment** Neutral (64%) Neutral (69%) **Negative Sentiment** 28% 21%	Customer Health — Resolution Time by Priority	information is in a box plot - overall almost same info except varying by quite a lot for number of critical tickets	no	it's slightly more accurate this time
4	What are the top 10 accounts by support ticket volume, and what is their total deal revenue?	ACCT-041 stands out significantly with 5,010 tickets — nearly double the next highest account — and the largest deal revenue at \$40,722. The top 10 accounts collectively account for 16,294 total tickets and \$168,230 in deal revenue. The average deal value across these top 10 accounts is \$16,823. Notably, high ticket volume doesn't always correlate with high deal value — for example, ACCT-036 has 980 tickets but only \$7,950 in deal revenue, while ACCT-024 has far fewer tickets (460) but a higher deal value (\$15,381).	Customer Health — At-Risk Accounts table	dashboard show the same	yes	
5	Are there any campaigns where we spent more than we earned back?	Every single campaign is currently operating at a loss — none have achieved a positive ROI. Q3 Growth Sprint is the worst performer at -\$381.11, followed closely by Digital Retarget at -\$378.50. NovaEdge Awareness has the smallest loss at -\$266.86, making it the relatively best-performing campaign. The overall Lead-to-Deal Conversion Rate is only 10.4%, which likely contributes to the negative returns across all campaigns. Reflection (include in written summary)						
Where did Q agree with the dashboard?		Where I hadn't changed anything within the Topic				
Where did Q disagree or struggle? Why?		I think setting Topics is more detailed work than we really understand that can cause skewed insights if not done properly				
When would you use Q vs. the dashboard to answer?		Q would be used when in a hurry and want to validate information without having to read a dashboard or without putting together new queries into dashboard view.
